## IN THE SPECIFICATION

A. At page 8, lines 4-10, please delete the present paragraph and replace with the following paragraph:

25

30

This application is a continuation of application serial no. 09/303,201, filed on 30 April 1999. Referring now to Fig. 1, a cross-sectional view of the novel device 2 before engagement of the sealing mechanisms will now be described. The device 2 generally contains a top swage 4. The top swage 4 contains a first tapered outer cylindrical surface 6 that extends to a conically tapered surface 8 which in turn extends to the second outer cylindrical surface 10. The top swage 4 has a top end 11 that extends radially inward to the inner bore surface 12 that terminates at the end 14. In the preferred embodiment, the top swage 4 is made of high tensile steel, having a 108 or higher on the Rockwell B scale.
